DETAILED ACTION***Specification***

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Grieshaber DE 4026820.

Referring to claim 1, Grieshaber discloses a handheld piezoelectric acupuncture stimulator as described (abstract, column 2, line 65 – column 3, line 7, figs. 1 and 2 and column 5, lines 10-46).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grieshaber DE 4026820.

Referring to claims 2 and 3, Grieshaber discloses the claimed invention except for wherein the leaf spring contact with a bent end portion is fixed in a recess at the free edge of an end member of the exterior casing, said end member serving as a support for the contact ring and wherein the actuator button is mounted in a top member placed

in extension of the exterior casing and the contact ring and having a protruding abutment as support for the forefinger knuckle of the user, when the actuator button is operated by the thumb. It would have been an obvious matter of design choice to one skilled in the art to modify the invention to include wherein the leaf spring contact with a bent end portion is fixed in a recess at the free edge of an end member of the exterior casing, said end member serving as a support for the contact ring and wherein the actuator button is mounted in a top member placed in extension of the exterior casing and the contact ring and having a protruding abutment as support for the forefinger knuckle of the user, when the actuator button is operated by the thumb, since the applicant has not disclosed that a leaf spring contact with a bent end portion is fixed in a recess at the free edge of an end member of the exterior casing, said end member serving as a support for the contact ring and wherein the actuator button is mounted in a top member placed in extension of the exterior casing and the contact ring and having a protruding abutment as support for the forefinger knuckle of the user, when the actuator button is operated by the thumb. provides any criticality and/or unexpected results and it appears that the invention would work equally well with any design, such as the design as taught by Grieshaber as a means to operate the stimulator.
